It appears that every man’s insomnia is as different from his neighbour’s as are their daytime hopes and aspirations.

—F. Scott Fitzgerald

Anyone with the most rudimentary knowledge of sleep appreciates that there is light, medium, deep, and dreaming sleep (see Fig. 1-1).

The significance of these various levels and types of sleep has become much more appreciated over the last half-century. In the realm of the depiction of sleep and art there are a number of themes that repeatedly emerge. One is clearly the intense fascination with dreams and dream imagery. A second is religious themes, a third is the parallel between sleep and death, and for sleep researchers there is the depiction of sleeping individuals where a spot diagnosis might be attempted. Other themes include the issue of reward, abandonment of conscious control, and a depiction of innocence and serenity associated with sleep and the erotic.

The subject of sleep is revisited in art time and time again. Why do artists return to this inactive, common, basic human function? Certainly, a sleeping Venus is not as exciting as a dramatization of a bombing on a Spanish town or as uplifting as a starry night. The appeal of sleep lies in the fact that, although it is common, it is extremely complex. A sleeping woman takes on the posture of death but is very much alive. She is conscious but not cognizant. She lies physically in reality but her thoughts run in fantasy. Sleep delights, frightens, regenerates, and may even lead to fatigue. It can overpower like a heavy, irrepressible fog or elude us like the sweet thrills of happiness.

Furthermore, although sleep is a basic human function, it is a unique experience for everybody. Thus, just as every man’s sleeplessness differs from his neighbor’s, so does his sleep. Sleep is a necessity and every person does it (or hopes to), but the actual experience cannot be shared. When one goes to sleep, he falls alone, and when he enters dreamland, he walks by himself. Here lies the appeal for artists. This inactive state contains so many connotations, evokes a large array of emotions, and holds an abundance of internal activity. How does one execute through painting one’s experiences and thoughts on sleep? Artists encounter a great barrier to overcome in trying to convey a multifaceted action whose origins lie in inaction. It is extremely difficult for an artist to separate one sleeping figure who may represent strength in sleep from another that symbolizes vulnerability.

This chapter explores the various devices and methods artists use to articulate their explorations and understandings of sleep. Furthermore, it investigates the different themes and ideas that artists have had about this mysterious human experience.

**Mythology**

One way artists explore sleep is through mythology. Artists take advantage of the viewer’s knowledge of and familiarity with the characters, stories, and settings of myth. This allows the artist to convey his or her definition of sleep by immersing it in these visual mythic cues. This is accomplished once the viewer recognizes these cues because it forces the viewer to ask herself, What are the implications of sleep in the context of the story?

An example of this is Sandro Botticelli’s Mars and Venus (Fig. 1-2). In this painting, the fully clothed Venus sits at the left, upright and alert, whereas the sleeping Mars on the right lies languidly, incapacitated, exposed, and vulnerable. Venus appears to be in control while Mars is reduced to being a plaything for the baby satyrs. Thus, this painting likens the state of sleep to weakness. It is a powerful force that can overtake the god of war. Sleep is undesirable because it is capable of lowering the defenses of someone.
as formidable as the god of war. The god of war becomes subject to humiliation. Furthermore, he has become prey to the outside world. This power of sleep is often not appreciated by patients, even those who suffer from sleep disorders, who may need to be reminded, for example, that sleep deprivation is used as a technique of torture. In other words, sleep is so highly necessary that “take those sleeping pills” may be the simplistic mantra.

Lorenzo Lotto’s Sleeping Apollo (Fig. 1-3) portrays sleep in a manner similar to that of Botticelli’s Mars and Venus. Once again, the sexes are divided; the naked female Muses are on the left and the slumbering Apollo sits on the right. Fame, who flies above Apollo, is ready to desert him and join the other Muses. The Muses have taken advantage of the sleeping Apollo to abandon their clothes and arts to frolic about. Like Mars, Apollo is unaware of the activities of the waking world. The effects of sleep in both paintings produce a comic reaction. However, the way Mars and Apollo are portrayed in their sleep produces two decidedly different comic reactions. The sprawled, exposed sleeping Mars, with his own lance held by the baby satyrs, pointing at him, is an object to be ridiculed. The portrayal of sleeping Apollo is less negative. He sits more upright with what appears to be an instrument in his hand. He is depicted more like the dozing professor whose students have gone off to play.

Thus, sleep takes on a different meaning. The undignified position of Mars, the god of war, compounded with the connotations of strength, power, and chaos, portrays sleep as a weakening force that places one in a compromising position. On the other hand, in Sleeping Apollo, sleep appears not to take away strength or might, but reason. This is reinforced by the fact that Apollo is linked to reason and foresight. Sleep has removed him of rationality and made him completely oblivious to what has happened. This is further symbolized by the abandoning of the books and instruments of the Muses in front of him. Also, Apollo sits in the dark, enclosed by the trees, he is alone in the secluded realm of sleep and completely segregated from the outside world. Lack of rationality in sleep has become a key issue in the realm of forensic aspects of sleep, with recent media emphasis on the condition of sexsomnia and the consternation over the lack of mens rea in the sleeping state.

Giorgione’s Sleeping Venus (Fig. 1-4), instead of two figures, has one, the female figure, who is sleeping. As in the other two paintings, Venus lies in a pastoral setting; but unlike in Mars and Venus, she is alone, and she is the one who is sleeping and nude. The curves of her body emulate the undulating hills. She has her left hand covering her genitals. This is an extremely erotic picture.

Sleep has taken on a different meaning here. Venus has become not someone to laugh at, like Mars or Apollo. Her strength or power or reason has not been taken away from her because of sleep. Rather, sexuality—which Venus is associated with—has become enhanced by sleep. According to Maria Ruvoldt, the conscious placement of her hand over her genitals refers to her procreative powers. Also, she has her right arm up to expose her armpit. This gesture is commonly associated with seduction in certain periods in Western art. Moreover, since the curves of her body imitate the landscape, there is a direct connection between her and nature, thus further associating her with fecundity.
Instead of mythology, Pierre Bonnard turns to the Bible in his representation of sleep. In his oil painting *Earthly Paradise* (Fig. 1-5), he depicts a slumbering Eve and an alert Adam. Bonnard utilizes the same pictorial language in his rendering of Eve: the exposed armpit and her rounded form alluding to nature. Her rendering and sleeping posture make her look thanatotic.

Although the pairing of the two biblical characters reminds us of Botticelli’s *Mars and Venus*, they are not similar to the two mythical characters. By using the same visual language as Giorgione, Bonnard allows the female sleeper to be the empowered, natural being, as opposed to Botticelli’s weakened male protagonist. One could argue, as the Art Institute of Chicago does, that “the male, seen as essentially intellectual, is able to transcend the earthly.” However, one can interpret this as Eve being given more power because she was given more attention in terms of her physiognomy, rather than the awakened Adam. She is foreshortened and is positioned closest to the viewer. Furthermore, her color is in great contrast to the rest of the painting so that she becomes a focal point and detail is given to her face. On the other hand, Adam is rendered in shadow and only his profile is shown. Although he is standing—which could insinuate evolution—he is colored like the rest, to the point where he looks like a tree, or is simian-like.

In works such as Piero della Francesca’s *Dream of Constantine* (Fig. 1-6), sleep is depicted as the state in which the divine communicates with humans. This is a common occurrence in mythology and religious stories. Well-known instances are the Bible’s Jacob and his dream of the ladder that reached heaven, or the Egyptian Pharaoh’s prophetic dreams that would be interpreted by Joseph. Whatever the story, it is necessary that the protagonist enter the state of sleep in order to hear God speak to him. In this early Renaissance painting, Constantine is shown reposed in a tent and is flanked by his sentinels. There is—or what appears to be—an angel swooping from the left-hand corner as if to deliver a divine message from God. This image depicts the moment, Laurie Schneider Adams tells us, when Constantine’s dream “revealed the power of the Cross, and led to his legal sanction of Christianity.” As opposed to Botticelli’s *Mars and Venus* and Giorgione’s *Sleeping Venus*, Constantine is neither emasculated nor empowered with sexual prowess. Sleep is depicted as a state wherein only the divine becomes revealed and the sleeper can realize higher states of consciousness. This is further exemplified by the contrast between Constantine and his guards. The leader is composed and peaceful in his rest as though receptive to a divine message. (This may be thought of as a foreshadowing of current research that links sleep in a critical way with the consolidation of memory.) The soldiers, on the other hand, appear languid and unaware of the angel that is delivering the message. The artist utilizes both this event and sleep as a way to demonstrate the former and to explore the latter. It is interesting to note that the title and content of the painting force the viewer to ask herself whether or not she is witnessing an event that is occurring in reality, or are we privy to the actual dream...
of Constantine? Are we the awake sleepers who are also in Constantine’s higher state and are witnessing the delivery of this divine message?

**Sleep as Rest**

**SIDEBAR 1-1**

John Keats equated sleep with rest.

**From Sleep and Poetry**

WHAT is more gentle than a wind in summer? What is more soothing than the pretty hummer That stays one moment in an open flower, And buzzes cheerily from bower to bower? What is more tranquil than a musk-rose blowing In a green island, far from all men’s knowing? More healthful than the leafiness of dales? More secret than a nest of nightingales? More serene than Cordelia’s countenance? More full of visions than a high romance? What, but thee Sleep? Soft closer of our eyes! Low murmerer of tender lullabies! Light hoverer around our happy pillows! Weather of poppy buds, and weeping willows! Silent entangler of a beauty’s tresses! Most happy listener! when the morning blesses Thee for enlivening all the cheerful eyes That glance so brightly at the new sun-rise.

Although it may seem that only the mythical, powerful, and divine are depicted sleeping, there have been many examples of those in other social strata sleeping. Jan Steen’s *The Dissolute Household* (ca. 1668) (Fig. 1-7) represents what modern times would term a “dysfunctional family.” This family setting is the picture-perfect example of indulgence of many types: gambling, gluttony, and prostitution. All order is lost in this household where cards and oysters are strewn on the floor. The eye is immediately drawn to the woman at the table in restful sleep. Vernon Hyde Minor states that she is the wife of the man who is philandering with the prostitute. It is as though all the bawdiness has worn out the wife. This echoes the themes in Botticelli’s *Mars* and Lotto’s *Apollo,* like Mars and Apollo, the weakened state of sleep/sleepiness/tiredness (overlapping but distinct states) has made the wife vulnerable enough to become both the fool and the cuckold. Amidst all the indulgence and disorder, a monkey in the upper right corner plays with the clock and essentially “stops time.” It is as though this morally challenged family is perpetually caught in this state of depravity. It insinuates that the only course of escape is to move into another state of being—sleep.

That sleep is a wondrous healing state of escape and rest and comfort for all is a common artistic theme, depicted in Laurent Delvaux and Peter Scheemakers’ *Cleopatra* (Fig. 1-8). Jean-François Millet produced *Noonday Rest* in 1866 (Fig. 1-9). In 1875 John Singer Sargent emulated (see the signature) this image in *Noon* (Fig. 1-10). Van
Gogh in turn emulated the same theme in *Noon: Rest from Work* in 1890 (Fig. 1-11). The luxury of sleep and rest is the image in *Repose* (ca. 1911) of this wealthy woman painted by John Singer Sargent (Fig. 1-12A).

In *The Cradle* (1872), Berthe Morisot portrays how complex something like sleep can be for the artist. The infant is peacefully asleep. The mother is calm, relaxed, and grateful—but vigilant as she watches over her baby (Fig. 1-12B).

In all of these examples a clear contrast is established: sleep and awake, unaware and alert, empowered and weakened. By depicting opposites side by side, artists enabled viewers to define these conscious states by what they were not. This is an extremely effective way to explore sleep beyond the physical signs but difficult from an epistemological perspective or psychological perspective. The alert poses of Botticelli’s Venus and of Bonnard’s Adam set against Mars and Eve, respectively, remind us of what sleep is not: a state of awareness and strength. For Lotto’s Apollo, Steen’s sleeping Wife, and even Giorgione’s Venus, sleep is not being part of the active world. In Giorgione’s *Sleeping Venus*, one could say that the landscape with the village painted in the right is Venus’ antithesis. It is a reminder that while Venus is asleep, life in the town must and does continue. And lastly, for Piero della Francesca’s Constantine, sleep is a demarcation between the blessed and the ignorant.
Dreams, Danger, and Death

The painting of dreams is an excellent way for artists to explore sleep. Not only does it allow them to share their unique experiences and to move sleep from the external to the internal, it also is a way to combine elements that would not normally share the same space.

Francisco Goya, in *The Sleep of Reason Brings Monsters* (ca. 1799) (Fig. 1-13), clearly shows that dreams can be disturbing with invasion of the dreams by monsters. Henry Fuseli in *The Nightmare* (ca. 1781) shows a woman probably in a state of sleep paralysis (Fig. 1-14). She has visions of a devil-like creature on her abdomen and a horse’s head peering at her from the left, but she cannot move.

Another example of dreaming is Henri Rousseau’s *The Dream* (1910) (Fig. 1-15). In Rousseau’s *The Dream*, there is a nude female lounging on a Victorian couch in the middle of a jungle. There are many hidden animals, but there is one in the center that draws the viewer’s attention. It is an indefinable creature, which appears to be both human and animal, playing an instrument. The sky is light to indicate day, however, the moon is full and clearly visible. All these elements would not normally be together, yet the subject of dreaming allows them to be so. The juxtaposition of these things, combined with the realism in which they are rendered, evokes the feelings of eeriness and perplexity so often associated with dreams. There is a parody of the sleeping gypsy by Rousseau with the lion’s belly enlarged and little remains of the gypsy’s clothing. This was termed “The eaten gypsy” and reminds one that sleep may be restorative and positive but there is a lurking danger of sleep as well.

As we have seen, artists throughout time have actualized sleep through myth, religion, class, and dreams. Another recurring theme is death. That sleep may be a reversible form of death, and death a form of sleep, has always fascinated writers and artists, and even in the 19th century sleep and death were equated by some physicians.
**SIDEBAR 1-2**

William Shakespeare equated sleep with death.

From *Hamlet*, act 3, scene 1.

To be, or not to be: that is the question. Whether 'tis nobler in the mind to suffer The slings and arrows of outrageous fortune, Or to take arms against a sea of troubles. And by opposing end them? To die: to sleep: No more; and by a sleep to say we end The heartache and the thousand natural shocks That flesh is heir to, — 'tis a consummation Devoutly to be wish'd. To die, to sleep; To sleep: perchance to dream: ay, there's the rub: For in that sleep of death what dreams may come?

From *Macbeth*, act 2, scene 2.

Sleep that knits up the ravell'd sleave of care, The death of each day's life, sore labour's bath, Balm of hurt minds, great nature's second course, Chief nourisher in life's feast.

Religion has, as noted above, contributed to views about sleep in general and artistic portraits in particular. For example, a bed made of arrows is not generally counted among the beds one would be happy to rest on. The bed of arrows, as shown in Figure 1-16, belongs to Bhishma, a hero of the Hindus.

According to historical record, Bhishma’s bed of arrows was also his deathbed in a war that is said to have occurred around 6000 B.C. This emphasizes the perceived link of sleep and death.

Bhishma’s body was so covered with arrows shot at him that when he lay down, the arrows made a bed. Only his head was not supported by arrows. So Bhishma asked Arjun, another war hero, to create a pillow of arrows for him. This Arjun did by putting the arrows into the ground for Bhishma’s head. An interesting aspect of Bhishma’s death is that he could control the exact time of his death.

The states of waking, dreaming, and deep sleep are associated with the syllable *aum* that Hindus chant when they meditate. When the sounds a-u-m that make up *aum* are chanted, it is believed that one goes through all of the three states. Meditation is a means of connecting with one’s innermost self and is an integral part of Hinduism.

This linking of sleep and death is shown by the painter John William Waterhouse in *Sleep and His Half-brother Death* (1874). As one moves from foreground to background, one clearly goes from life to death. There is no mistaking which of the brothers is alive even though both have similar postures (Fig. 1-17).

As understanding of sleep through science, philosophy, literature, and art changes throughout time, so will the visual renderings related to sleep and dreams. While one might at first glance think that the more we understand about sleep the less we will be fascinated and that there will be a commensurate decline in the involvement of all artists in the subject of sleep and dreams, this does not seem to be the case at all. Current artists seem to be engrossed by the subject, just as modern song writers and poets have continued the compositions of librettists of opera and classical poets (who often wrote about sleep and dreams). Whatever the case, we will continue to dream.
